

## Controlled Substances Information Sessions

Columbia University EH&S will be hosting information sessions focusing on key points in the use and management of controlled substances, which includes licensing, procurement, proper storage and recordkeeping, the Appendix I submission process, as well as common mistakes found from both an IACUC and EH&S perspective. Since license holders are personally responsible for penalties related to non-compliance, useful tips in maintaining and improving regulatory compliance will also be discussed.

**Complimentary informational binders with resources and links will be provided for all attendees, along with refreshments.**

Due to limited seating, please **RSVP** for the event according to your selected location, date and time as shown below.

*\*Principal Investigators may extend this invitation to a maximum of 2 laboratory staff who work with controlled substances.*

### Columbia University Medical Center
